

# Champion Savannah Tobe

**Savannah Tobe:** Our Sweet Savannah was diagnosed with Angelman Syndrome in December 2021 at the age of 17 months. There were dark days at first as we navigated this new territory of developmental delays (gross motor delays, fine motor delays, non-verbal speech) and epilepsy that go along with Angelman Syndrome. Her diagnosis means many trips to Neurologists, Ophthalmologists, GI doctors, Geneticists, therapists (physical, occupational, and speech), and so many other appts that will last through her lifetime as Angelman syndrome is a chronic condition where Savannah will require 24/7 care the rest of her life. However, the silver lining is that Savannah is the sweetest and happiest little girl who brings smiles and rays of sunshine everywhere she goes!
